TENANTS OF THE ALMIGHTY
Arthur F. Raper
The Macmillan Company. 1943

Mr. Raper's book TENANTS OF THE ALMIGHTY is well named and is a most interesting and exciting story of Greene County, Georgia. The substance of the book is set forth in a very forceful manner by the use of excellent photographs by Jack Delano. The book attempts to bring to attention the problems of race relations, tenancy, population changes, soil conservation, securing a sound economy, cooperative effort, adequate leadership, standards of living, etc., as these factors operate in the social order typical of a historical Southern cotton plantation situation.

The author dwells at length on how desperately the farmers tried to get ahead, but it seemed impossible without some outside help. They tried everything from "Goobers to Rabbits", but failed. The result was a unified farm program which was a close cooperation of all agencies, both Federal and State. The author brings out the fact that much was accomplished to better the conditions of the families, but indicated that there is much more to be done. The various attitudes toward the program are quite interesting.

TENANTS OF THE ALMIGHTY should appeal to the general reader and particularly those interested in the conservation of natural and human resources.

THE AMERICAN LAND, ITS HISTORY AND ITS USES
William R. Van Dersal
Oxford University Press. 1943

"This book is a sort of sandwich. Its first two and last two chapters deal with land as such. The intermediate chapters deal with crops, edible or otherwise, produced from lands of different character. Those interested in the history of and use, the fitting of such uses into logical patterns, the protection of lands from erosion and similar subjects, will find the outside layers of the sandwich the more interesting. Those whose interest is in crops will find the inside layer arranged in a sort of stratified club sandwich pattern, in chapters on grains, cotton, vegetables, fruit trees, forests, livestock and so on...."

CROPS

ARTIFICIAL MANURES, or the conservation and use of organic matter for soil improvement. Arthur B. Beaumont. Orange Judd. 1943. 57.4 B38.

This little book treats the problem of soil organic matter broadly and practically, with particular attention to the preparation and use of artificial manures, including cover crops and green manures. The subject matter will be found helpful in practical ways to the home gardener, market gardener, truck farmer, general farmer, orchardist, and greenhouse operator, particularly in times like these when all are asked to produce more crops with less fertilizer.

DRAINAGE AND IRRIGATION

PRINCIPLES OF FIELD DRAINAGE. H. H. Nicholson. Cambridge Univ. Press. 1942. 54 N52.

This book should be of first interest and assistance to those whose business it is to organize, devise, advise on, and supervise work of field drainage. Its contents are compounded of the elements of soil science, of the results of some ten years' study of field drainage problems, especially those of heavy land, and of the experience gained since the beginning of the war by close cooperation with many War Agricultural Executive officials and farmers in dealing with drainage problems in the fields.

FOOD ENOUGH. J. D. Black. Jaques Cattell Press. 1943. 389 B56.

Professor Black, a member of the Economic Panel of Interium Commission of the United Nations Food Conference, has laid a reassuring hand upon our troubled brows to clarify our thoughts in regard to the entire food production picture. "The understanding of the food situation that the public now needs most is not of its many details, but rather an overall understanding that puts military, lend-lease, relief and civilian needs in their proper relationship."

Once you have read this book you will want to make FOOD ENOUGH required reading for your family and friends, before they utter another half-truth about the National Food Program over the back yard fence.
